

Pivotal Microservice Design Theory

**What is our primary goal as
Platform Architects?**

**Our goal is to engage
customers in the
cloud native
conversation to sell
Pivotal Cloud Foundry**

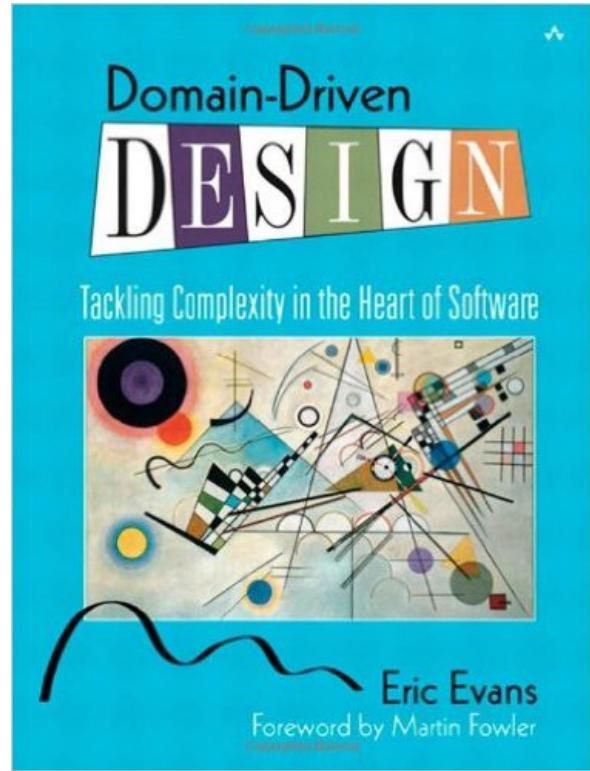

We help customers
see the microservices inside their
existing and future systems

Common Customer Questions

- What is the methodology for designing microservice?
- How to break up a monolith into microservices?
- What are the design patterns for building microservices?

Domain Driven Design

- An approach for designing software systems that model the complexity of the real world
- Kicked off in 2004 by Eric Evans
- A practical micro service design methodology

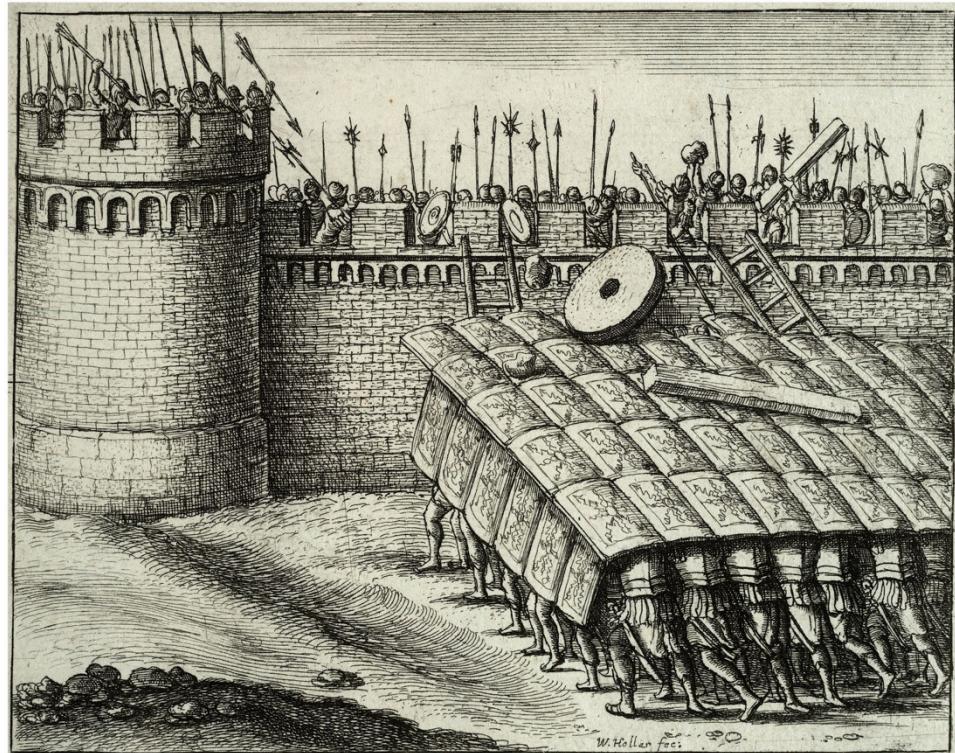

Strategic Domain Driven Design

- Domain
- Subdomain
- Bounded Context
- Context Map
- Ubiquitous Language
- Anti corruption layer
- Shared Kernel
- Open Host Service

Tactical Domain Driven Design

- Entities
- Value Objects
- Aggregates
- Services
- Modules
- Factories
- Repositories

Domain

- Domain is always organization specific
- Captures the unique know how and ways that an organization does business
- Composed of subdomains & Bounded Context

Subdomains

A subdomain is a subset of a domain

Core
Subdomain

Supporting
Subdomain

Generic
Subdomain

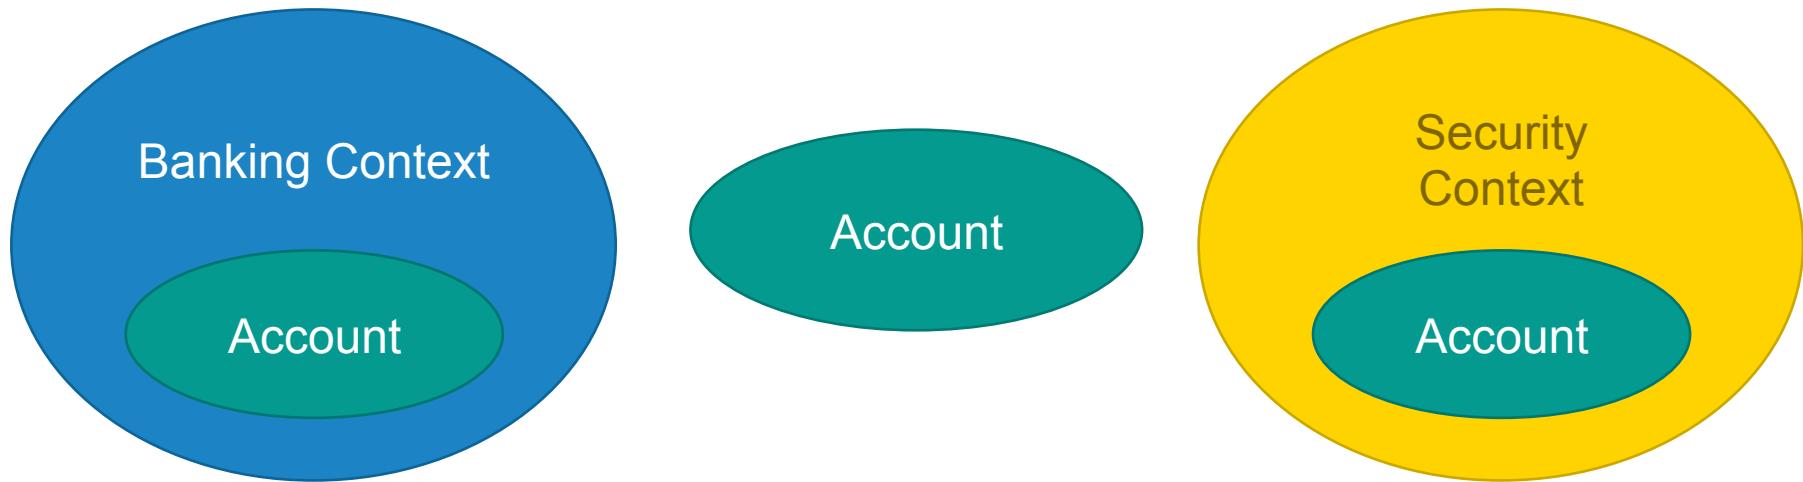

Build It
Perfectly

Build It
Just enough

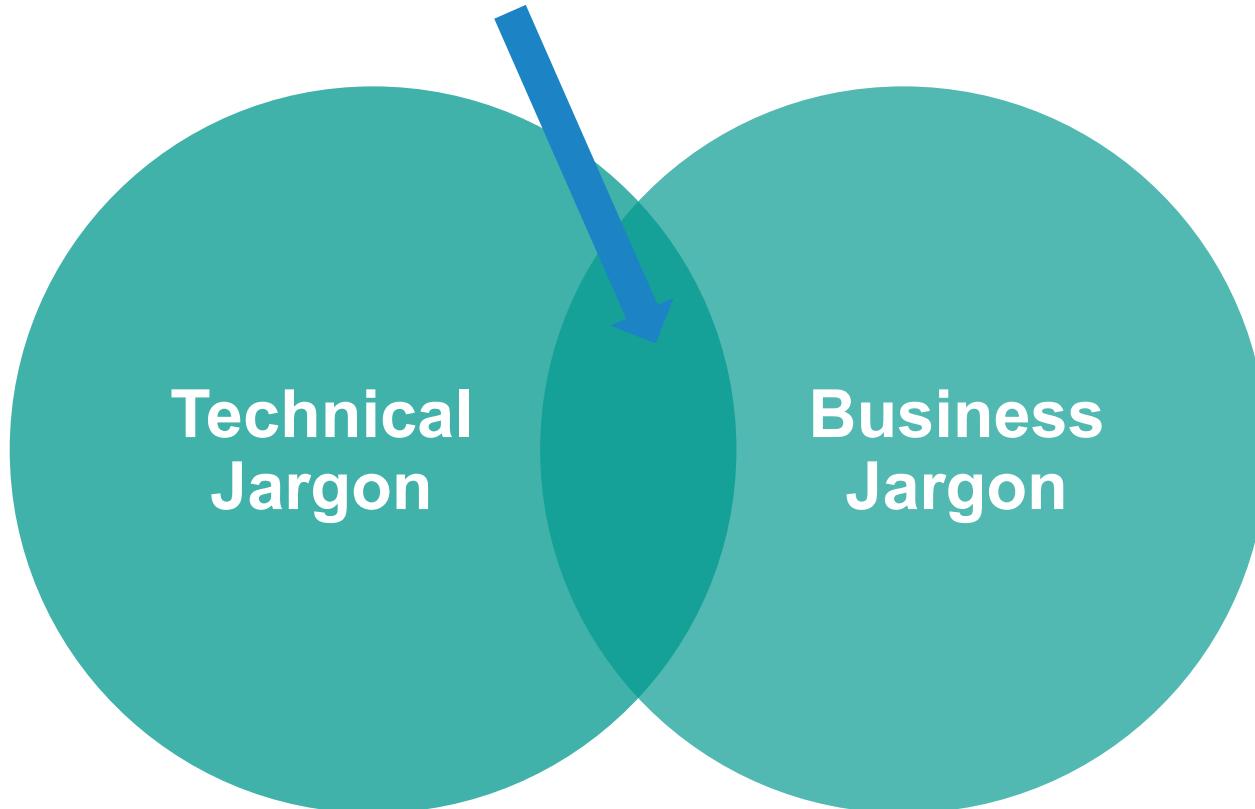

Buy It

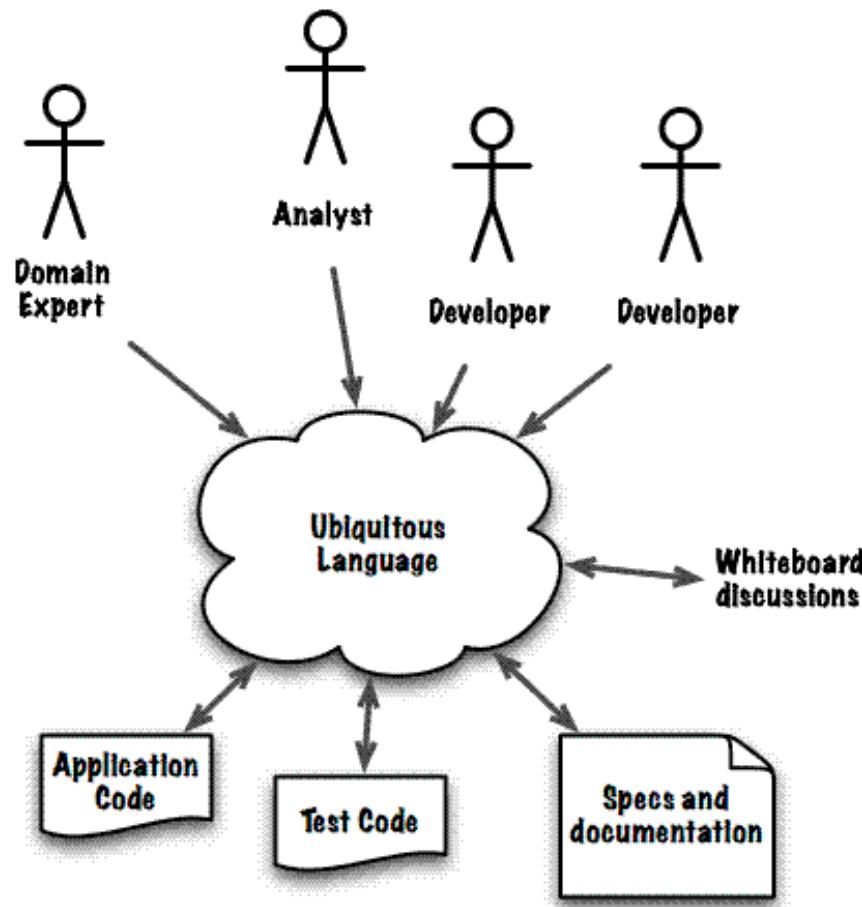

Bounded Context

A boundary inside which the meaning of a model is contained

Ubiquitous Language

Domain / Subdomain / Bounded Context

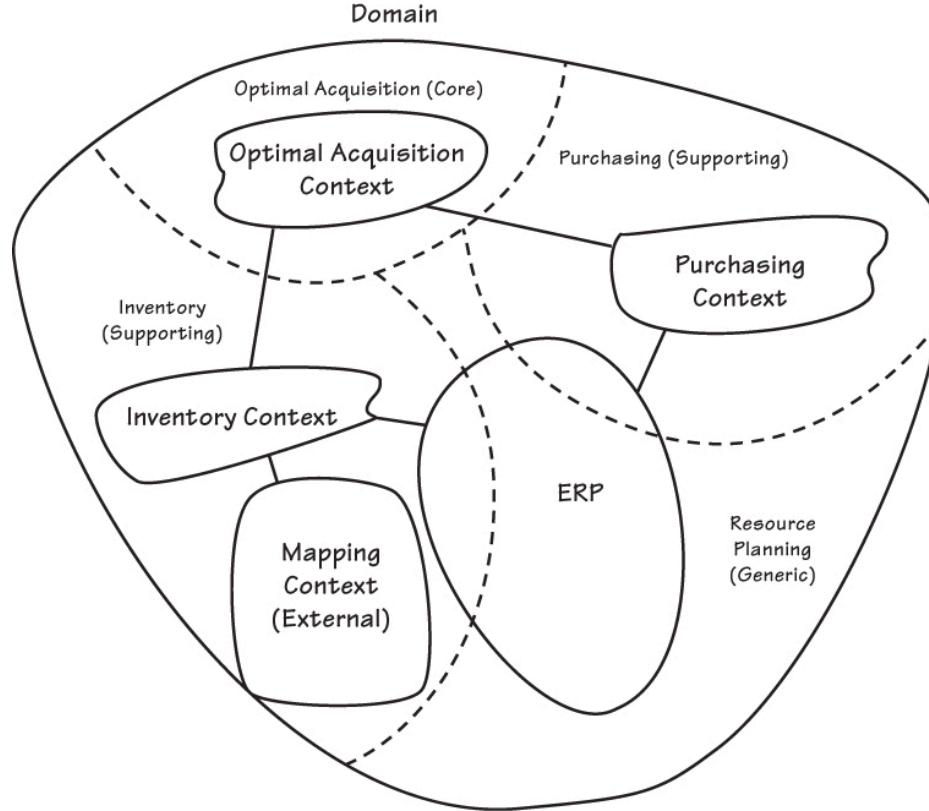

Figure 2.4 from Implementing Domain Driven Design

Domain / Subdomain / Bounded Context

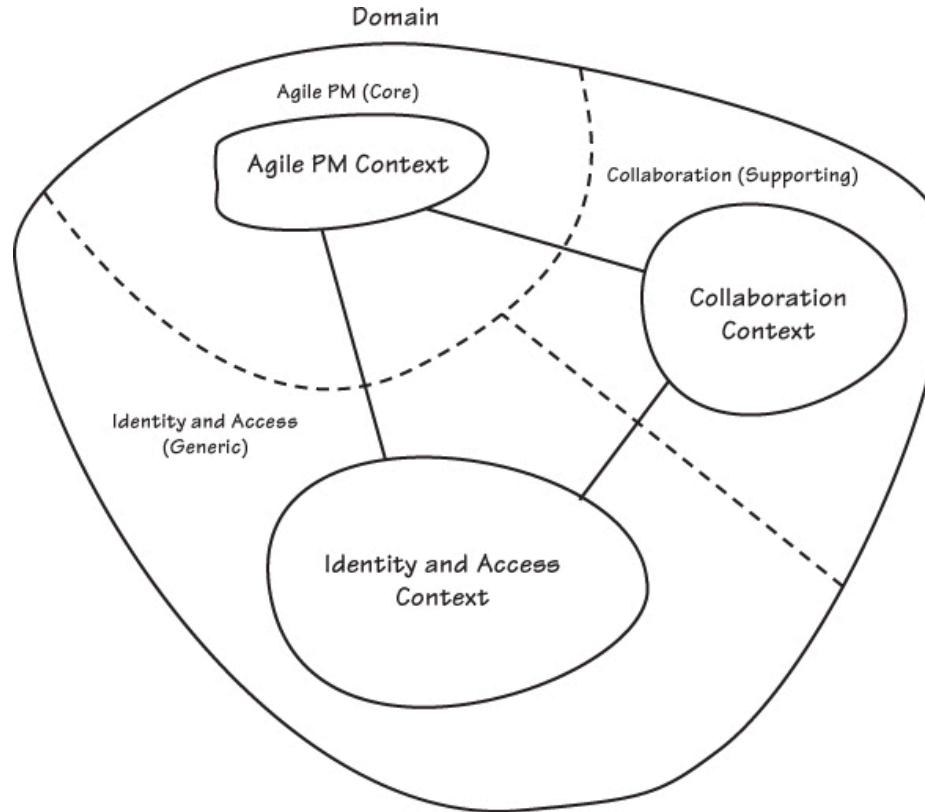

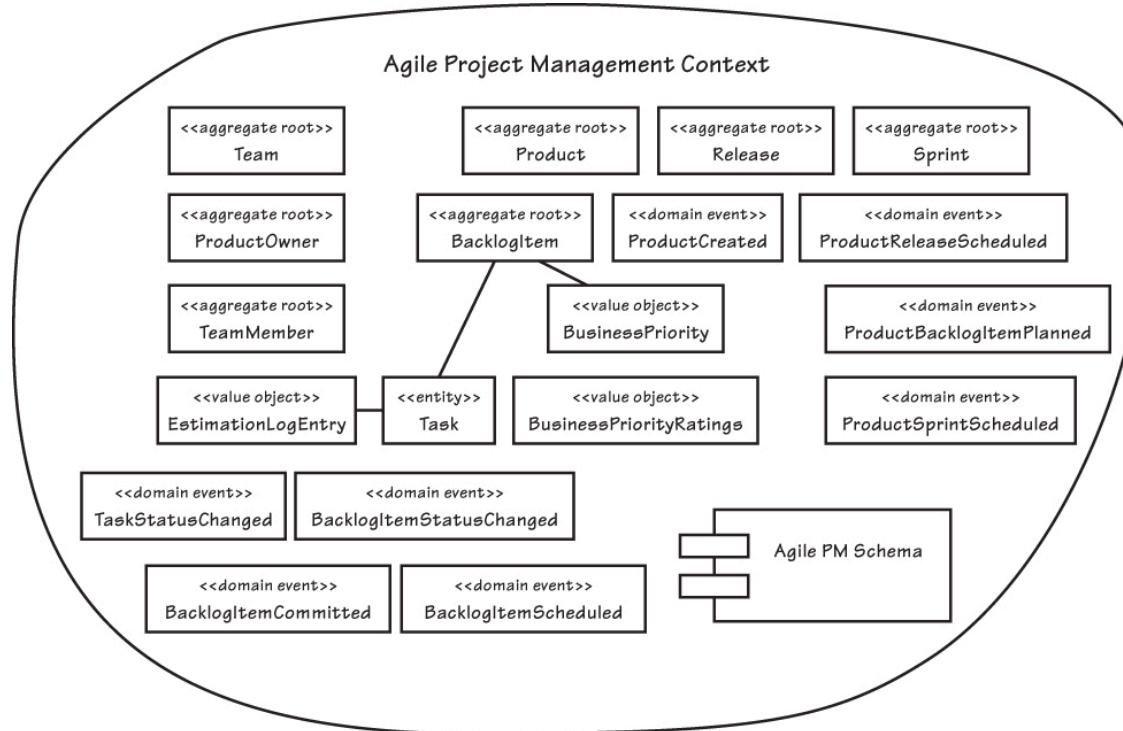

Figure 2.7 from Implementing Domain Driven Design

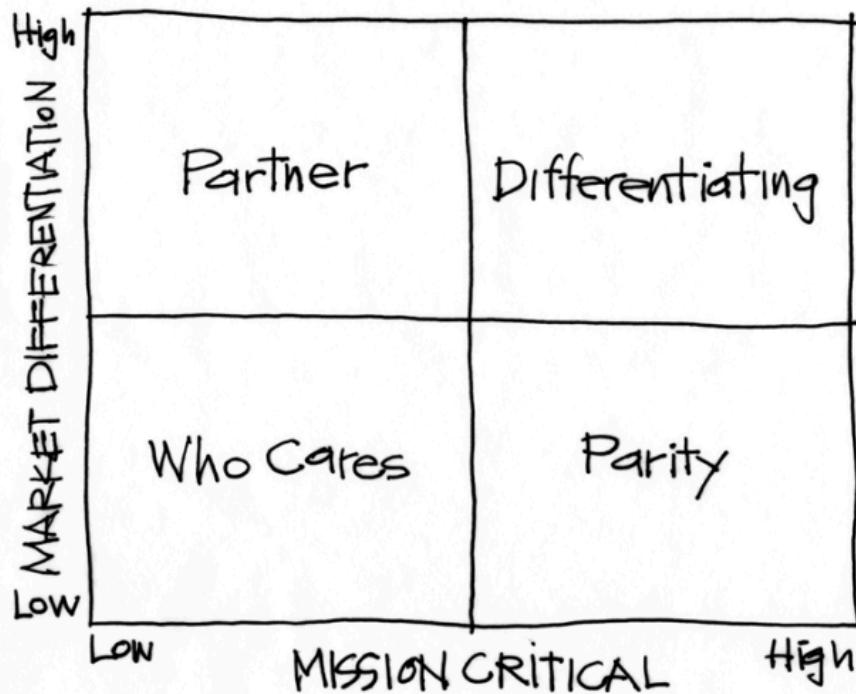

Example Bounded Context

- Entities
- Domain Event
- Value Objects
- Aggregates
- Services
- Modules
- Factories
- Repositories

Figure 2.10 from Implementing Domain Driven Design

Purpose Alignment Model

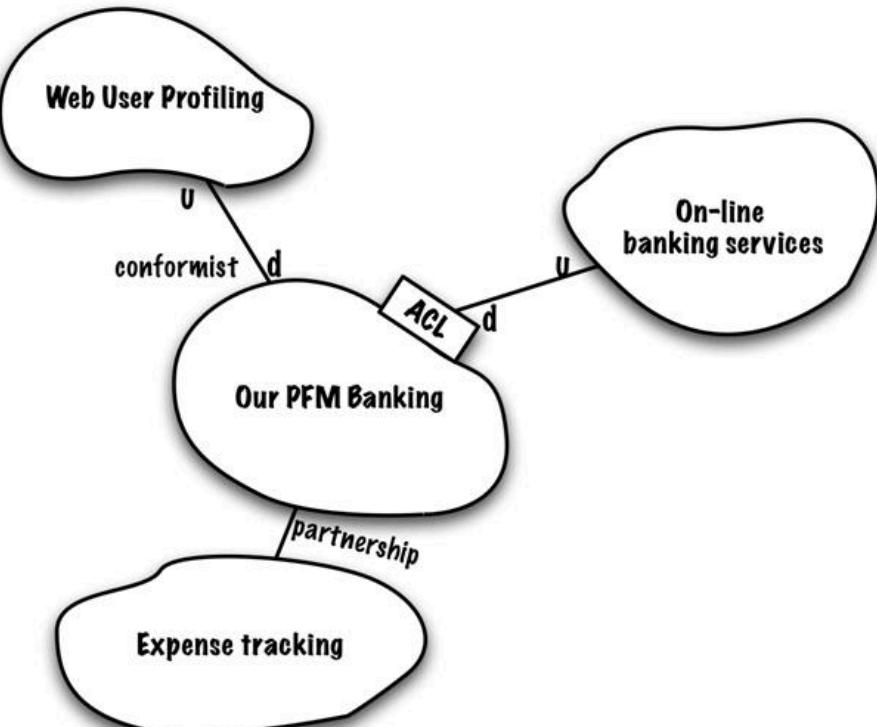

- **Making a build vs. buy decisions at the level of bounded contexts leads to better results**

<http://beyondrequirements.com/2012/02/18/purpose-based-alignment-model/>

Context Maps

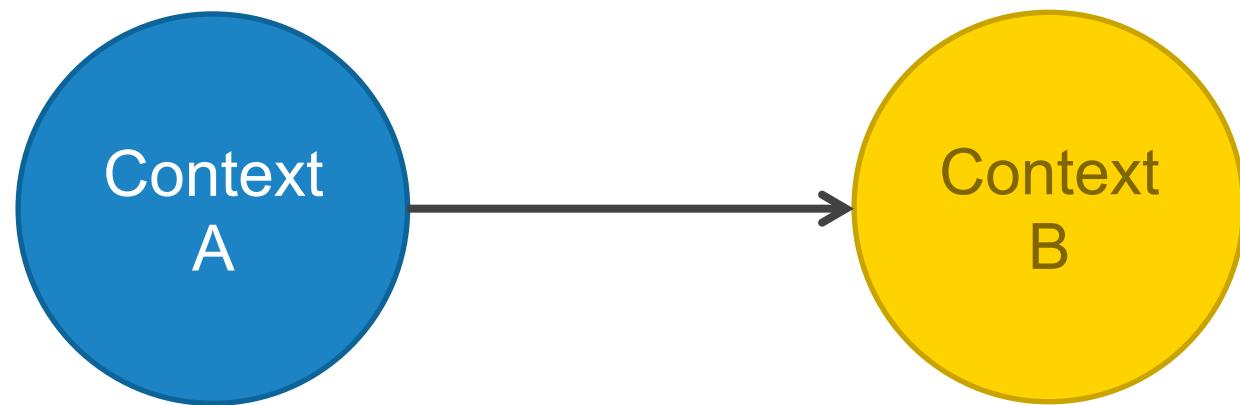

A map of the existing organizational & Integration relationships between different bounded contexts

- Partnership
- Shared Kernel
- Customer-Supplier Development
- Conformist
- Anticorruption layer
- Open Host Service
- Published Language
- Separate Ways
- Big Ball of Mud

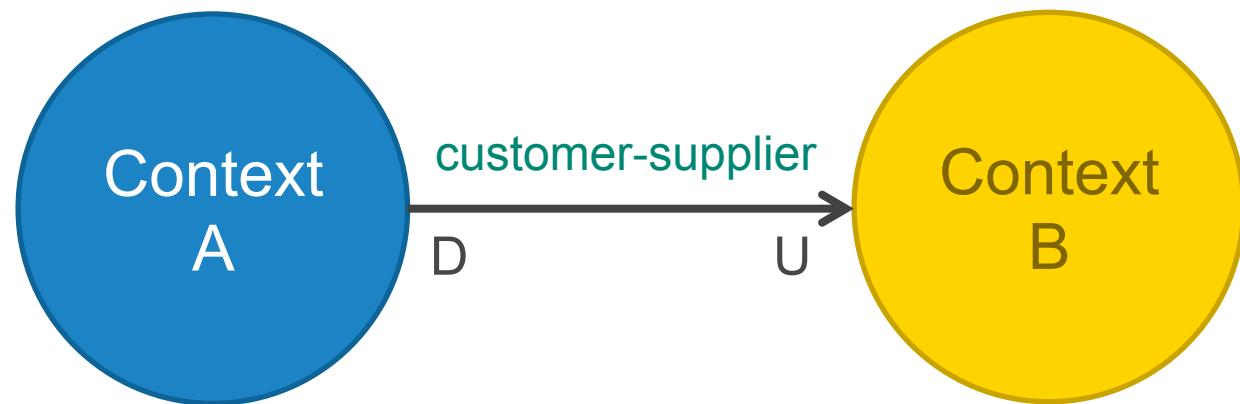

Partnership

Succeed or fail together promoting a close co-operation between teams working on the bounded contexts

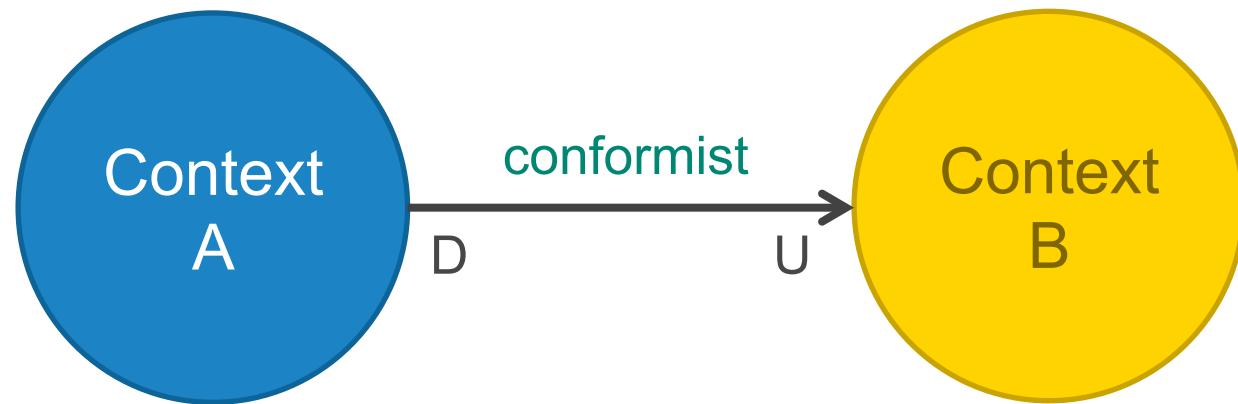

Customer Supplier

Success of the supplier partially depends on the success of the customer

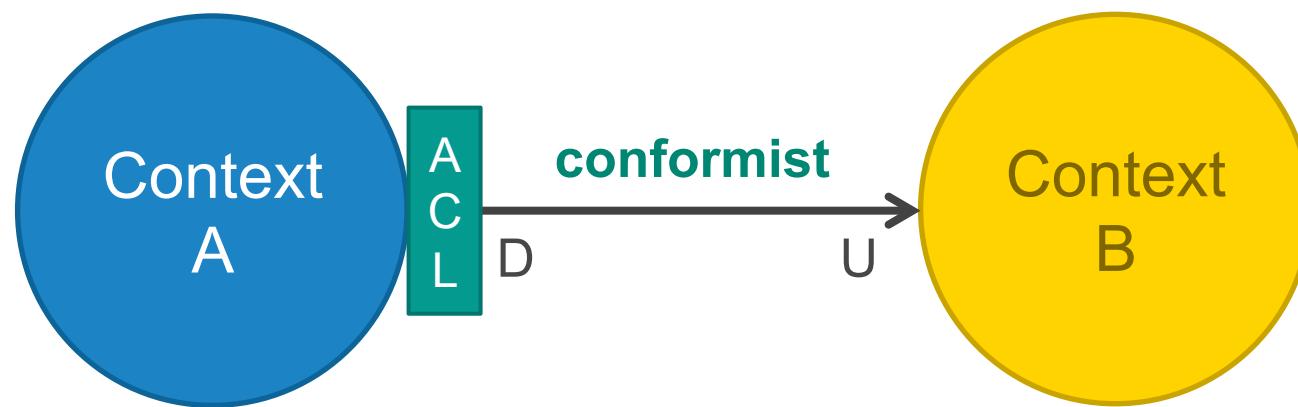

Conformist

Upstream does not care about downstream

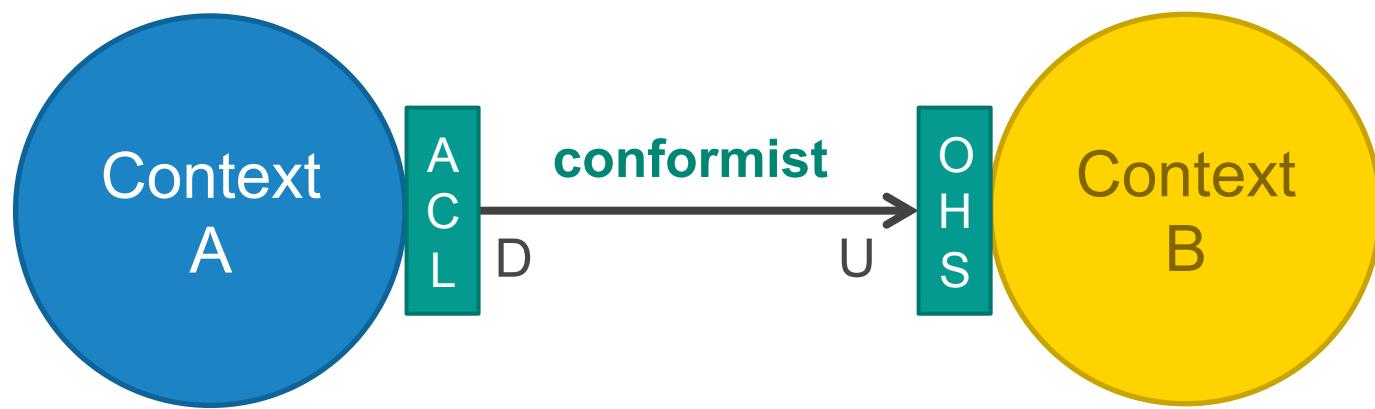

Anticorruption layer

An isolation translation layer allowing downstream to work with upstream using downstream bounded context domain concepts

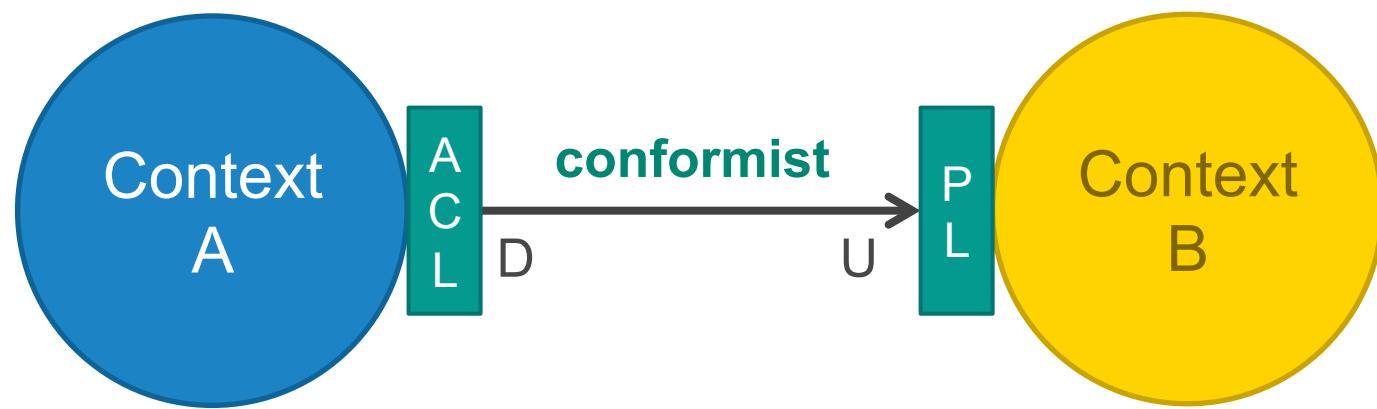

Open Host Service

An upstream protocol for accessing its services

Published Language

A common well documented language that facilities translation between different contexts

Context Mapping Example

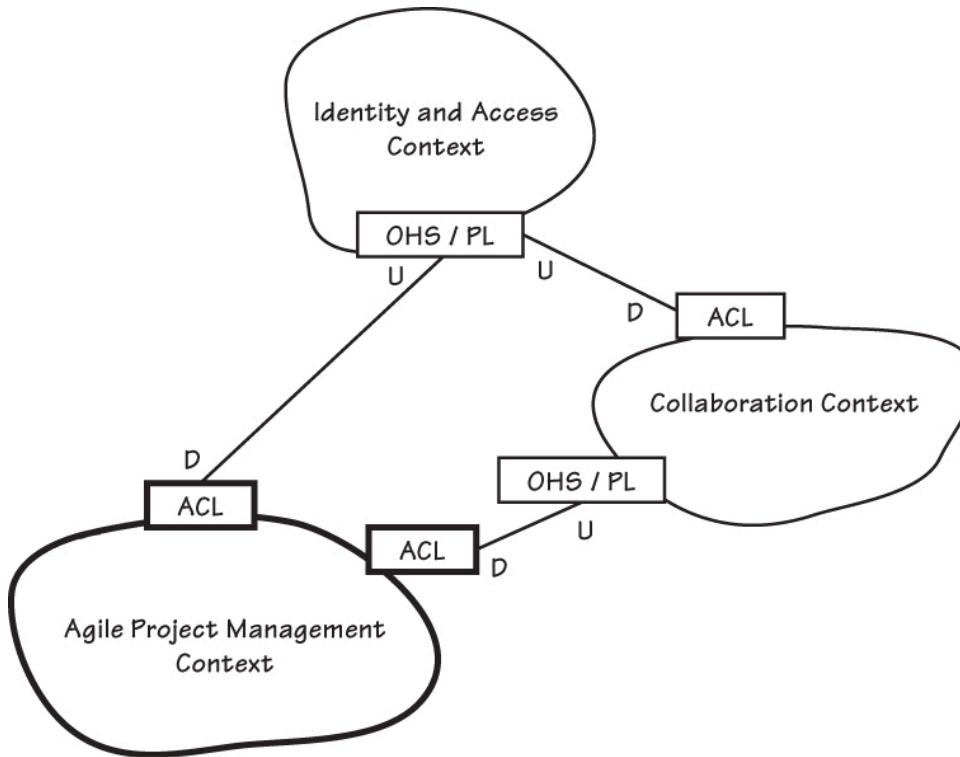

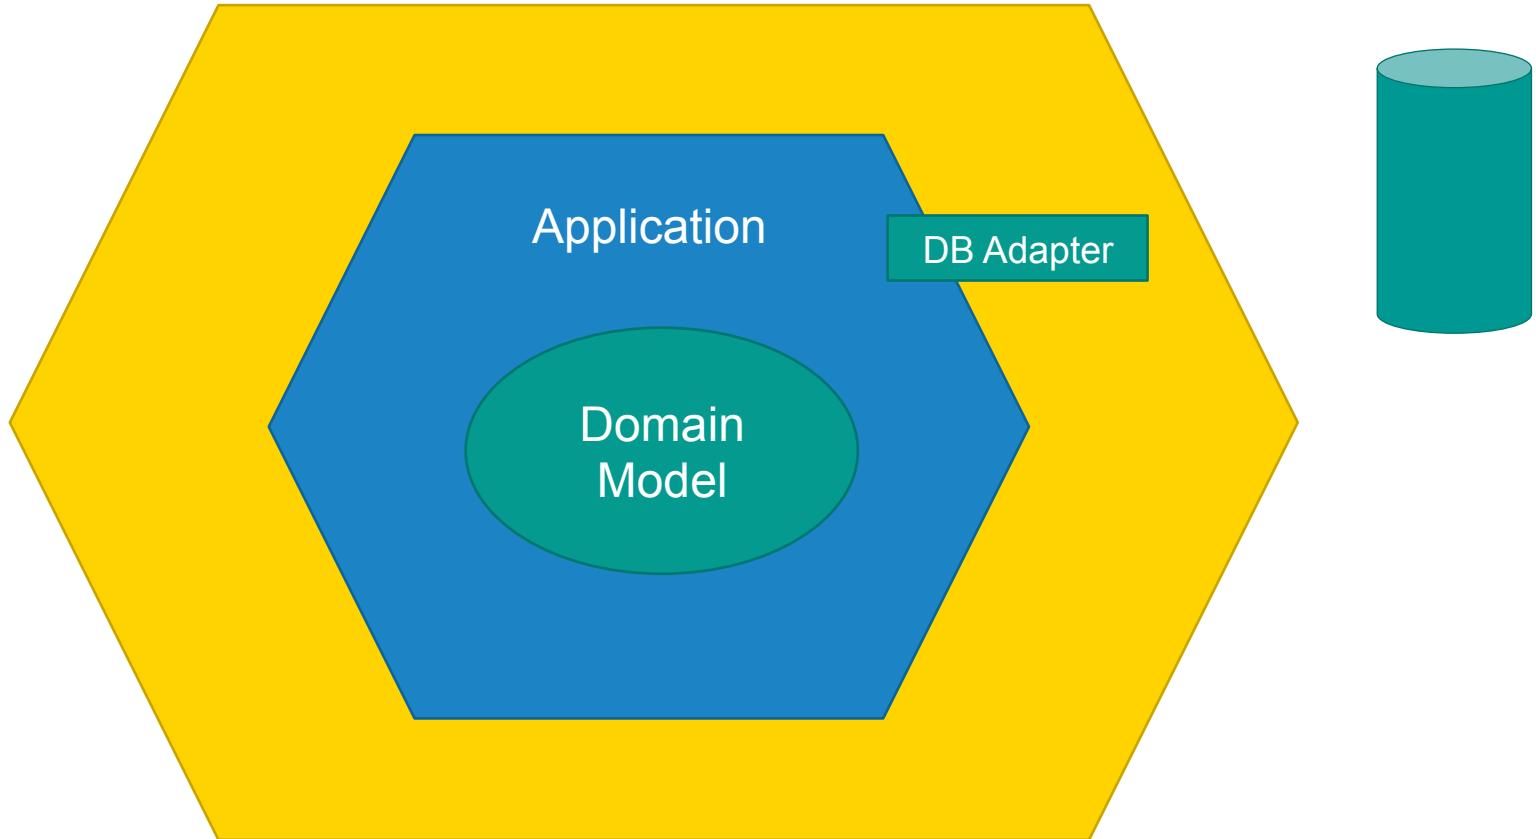

Figure 2.10 from Implementing Domain Driven Design

Hexagonal Architecture

Hexagonal Architecture

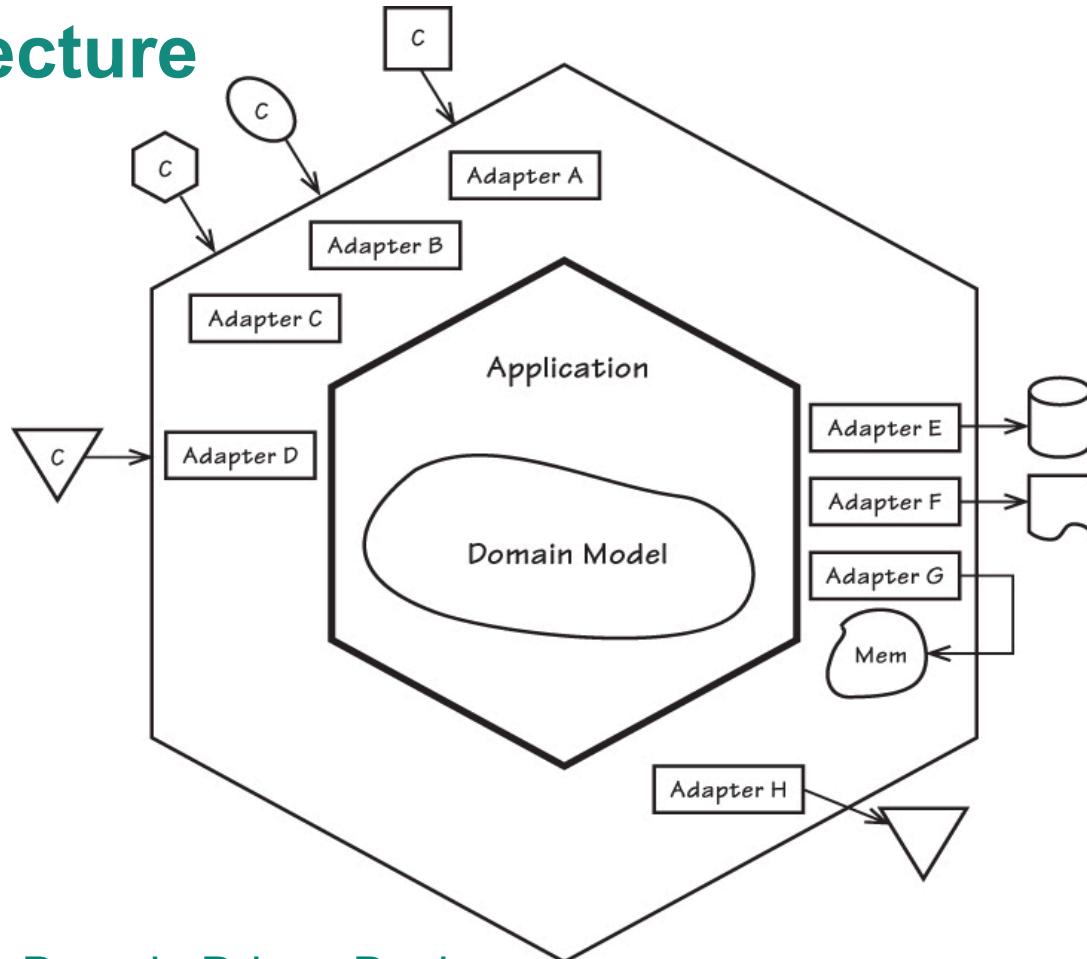

Figure 4.4 from Implementing Domain Driven Design

Hexagonal Architecture

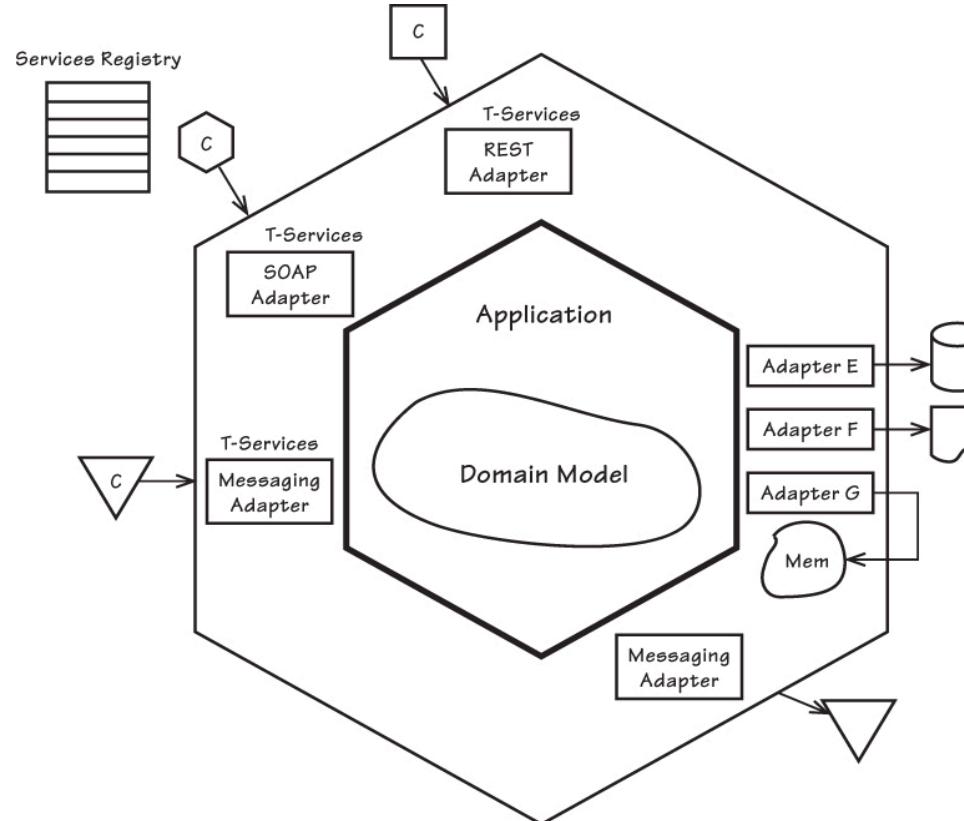

Figure 4.5 from Implementing Domain Driven Design

Manifestations of DDD

Theory	Practice
Bounded Context	Spring Boot project in a developer's IDE a container running on PCF
Aggregate / Entity / Value Object	JPA Hibernate Entity
Repository	Spring Data Repository

A pound of feathers or a pound of stones?

“Domain-Driven Design for the Database Driven Mind”

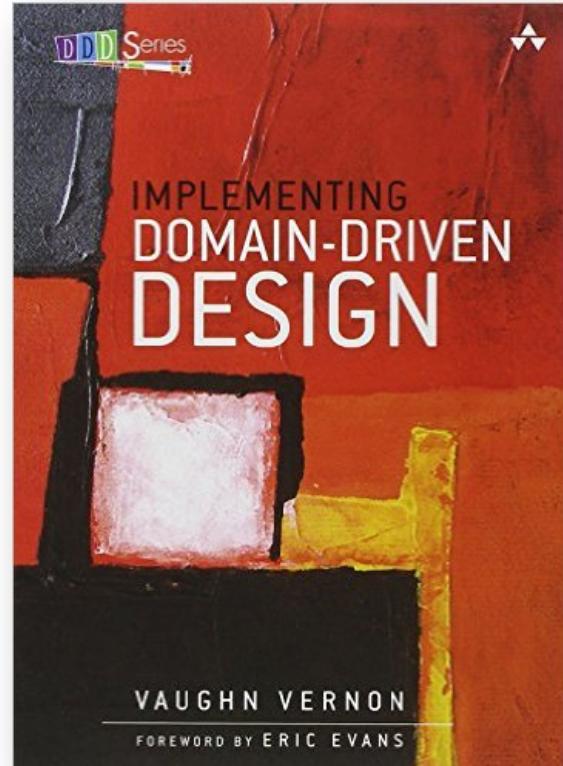

- 80 min video by Julie Lerman from May 2015
- Focuses on Bounded Contexts and their relationship to databases along with common technical objections for implementing Bounded Contexts
- Uses .NET Entity Framework examples but equally applicable to JPA
- <https://channel9.msdn.com/Events/Ignite/2015/BRK3724>

DDD & Microservices: At Last, Some Boundaries!

- 49 minute video by Eric Evans from Dec 2015
- Focus on Context Mapping and integration between different bounded contexts
- Great stuff for what a microservice & DDD
- <https://www.youtube.com/watch?v=yPvef9R3k-M>

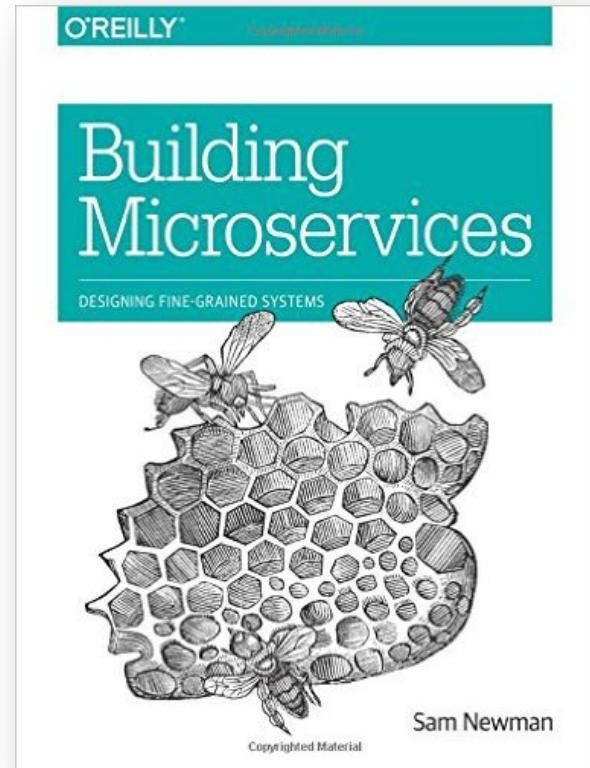

Recommended Reading

- New to DDD? start with this book
- Published in 2013
- 612 pages
- Easier read than Eric Evans book
- Clarifies things that are easy to miss in Evans book

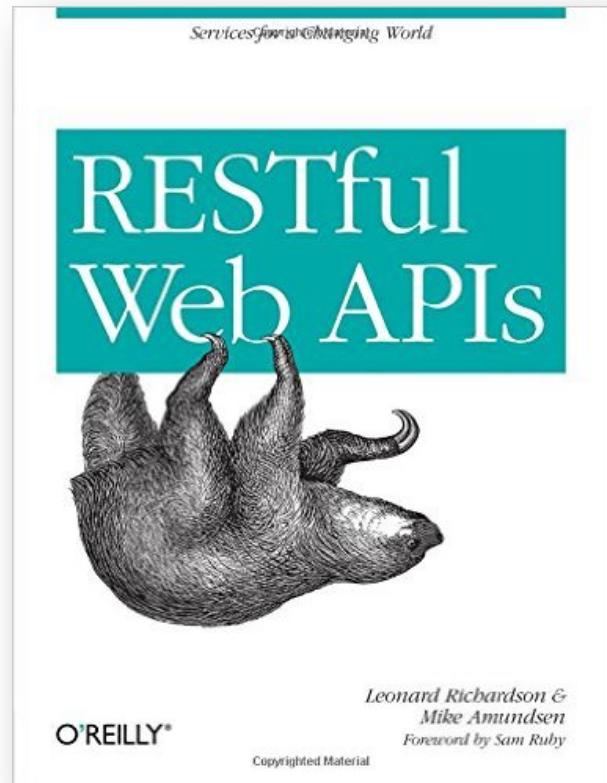

Recommended Reading

- Fast read
- Published in 2015
- 259 pages
- Covers a lot of the design micro service issues does it dive in depth on any specific issues
- Assumes a background with larger topics such as DDD

Recommended Reading

- Fast read
- Published in late 2013
- 406 pages
- Deeper discussion of Hypermedia API's may
